
Performance summary

As Amazonians, we raise our performance expectations to meet customers' rising expectations. The performance summary represents how you performed compared to expectations for your role and level. There are 3 possible performance summaries: Exceeds High Bar, Meets High Bar, and Needs Improvement. To determine your summary, your manager reflected on your work using information gathered throughout the year, along with peer feedback and your self-evaluation.

Your Performance summary:

Meets High Bar

Your performance this year met Amazon's high performance bar for your role and level. Your contributions met expectations in delivering for your customers.

Leadership Principles summary

The Leadership Principles help define our culture, represent how we innovate on behalf of customers, and underpin how Amazonians work. The Leadership Principles summary explains your effectiveness at demonstrating Leadership Principles while delivering for customers at your current role and level. There are three Leadership Principles summaries: Role Model, Solid Strength, and Development Needed.

Your Leadership Principles summary:

Solid Strength

You consistently demonstrate Amazon's Leadership Principles in how you work. You are strong in many Leadership Principles and continue to grow in others.

Your growth and strength Leadership Principles

Super powers

A super power is an exceptional strength - one that stands out most about you.

Manager feedback

You bring a lot of strengths to your work at Amazon. What stands out for me is:

James is excellent at diving into a problem space, navigating the people and technologies involved, and finding ways to apply himself and earn trust in doing so. When James engages in delivering a solution, the feedback from peers and stakeholders is excellent, without fail.

Shared March 18, 2025

Peer feedback

James demonstrates strong technical and management skills when we work on Ryanair. James is quick to put his hands up and engage more tenured engineers with deep expertise to build a team around us when his knowledge runs out. His comms skills are his superheroes.

James excels at driving cross-team initiatives, as demonstrated by his leadership in creating and publishing Tap Tool enablement videos. His ability to coordinate diverse perspectives, from WW Field Enablement team, senior SAs and SA Managers, to early career SAs, showcases his talent for fostering collaboration and delivering impactful results. He always seeks diverse perspectives, and adapts based on peer feedback.

James excels in recognizing gaps and building effective teams, as demonstrated in the Coffee Rocks Cafe project for re:Invent 2024. His collaboration with AppSec on security issues showcases his cross-functional skills. To progress, James should focus on developing autonomous decision-making and taking more ownership of end-to-end solutions, particularly in his areas of expertise.

James exemplified bias for action and customer obsession when he stepped up to help with our customers net new application development. James providing React/UI Advisory expertise, helped the customer to develop a centralized Data Management Portal (DMP) providing a user-friendly interface for maintaining and accessing data, further enhancing the solution's usability and flexibility.

James has a real strength in using his depth of knowledge to help improve others. at short notice he was more than happy to help me with a code review, and through his input my own skills improved in a matter of weeks. Feedback he provided, again at short notice, on an external presentation was also extremely valuable

James has an excellent technical knowledge and programming skills, especially a deep understanding of AWS CloudFormation, AWS SAM and frontend development. Beyond his technical acumen, he is a trusted advisor who consistently supports others in building demos and addressing technical challenges in application development. His work embodies customer obsession, ownership, the ability to dive deep, and a strong bias for action. Working within the team, James is an outstanding colleague, demonstrating unwavering commitment to support fellow members. He easily earns trust from others and lets the work speak for itself.

James has continued to be someone I can rely on to help with technical front end deep dives with my customers. His super power is his ability to maintain a calm presence that puts customers at ease while he dives into their requirements.

James is extremely proactive in organising and building a community around programming and his passion for the subject shows through this. He has a bias for action that when he has an idea, seeks confirmation that it would be useful and then puts it upon himself to set something up (e.g. Builders Book Club & FE Help).

James' super is his curious nature and always challenging you to do things the right way not just the easiest way. He will make sure he has all the information needed at the start of the

task to ensure he can contribute to the fullest of his ability, he never leaves anything out of an engagement and always commits his all.

James, a security guardian, exceeded expectations by proactively addressing all security concerns. He collaborated closely with the development team, offering valuable insights that enhanced both security and functionality. James's initiative extended beyond his official role, making him an invaluable asset to the team. His comprehensive approach significantly improved the overall security posture and contributed to smoother re:Invent launch.

Growth ideas

Growth ideas are suggestions of things you can do to develop and grow.

Manager feedback

Growth ideas from me:

I think James could invest time in looking deeper into the longer-term and wider-reaching implications and impacts of his work; identifying customer needs beyond the surface and learning how to communicate those needs, and the successes that result, to impress not just immediate stakeholders, but senior leaders too.

Peer feedback

I mentioned James had the capability to recognize gaps and build a team around him - there's an opportunity for him to further develop his ability to lead and drive decisions independently. In the Ryanair projects, James worked effectively as part of a team, but as he progresses in his career, he could benefit from taking more ownership of end-to-end solutions.

James could take initiative in proposing and contributing to strategic projects within the TAS organization, i.e. leading a cross-functional initiative. To broaden his business acumen, he could focus on understanding customer contexts and priorities. Engaging more with working-backward processes like 5Qs docs and PR/FAQs would strengthen his ability to drive consensus and navigate ambiguity when dealing with diverse stakeholder inputs.

James should be promoted to leverage his exceptional skills demonstrated in the Coffee Rocks Cafe project. To grow, he should focus on autonomous decision-making and end-to-end solution ownership. This opportunity aligns with the Leadership Principles of Ownership and Bias for Action, allowing James to mentor others and drive innovation.

I'd like to see James continue to evangelize his customer obsession, and spirit of collaboration through mentorship, coaching others, and facilitating intake mechanisms to engage his team

more often. Front end support is lacking, and James really leaned in focusing on our customers outcomes, a quality all Amazonians should strive for.

James' skills in development are something that a lot of the tech and field community would benefit from. Could he work out ways to scale his knowledge, perhaps through some UK wide enablement?

With his strong technical expertise, I would like to see James publish more technical content, such as AWS blogs, and present more frequently in public speaking sessions, especially at AWS Summit or AWS re:Invent, even though it's not the focus of his role. This exposure would not only showcase his talents but also add significant value to benefit both customers and the organization.

I've seen James start to build an internal technical community via the internal book club sessions, I'd love to see him expand "his brand" so more people are aware of his skills and can benefit from his expertise and the SA Engineering team.

In calls with customers/SA's James should strive to be more succinct and direct in his communication style. James will often seek to soften the blow when tickets don't align with HMB priorities and it can lead to ambiguity with the customer that could be avoided.

I would like to James grow as a leader in the team. He certainly has the skills and he should lean into being a little more vocal to show them off to more and more frequently.

For growth, James should aim to expand his security impact organization-wide. He could take on a more strategic role by leading cross-team security initiatives. Additionally, James should focus on calibrating and mentoring other guardians, sharing his expertise to elevate overall security standards. This approach would enhance his leadership skills and multiply his positive influence on the company's security posture.

Thank you!
